**Research** is one of the main area of the activity of classical University.

Vladimir State University possesses powerful science resources in different areas of studies and engineering (more than 100 Doctors and 500 Candidates of Sciences, 5 Doctorate Dissertation Councils, more than 400 Post-graduate and Doctoral Students).

Research is carried out in more than 20 scientific areas. According to the strategy of University development research must facilitate advances of society enabling to meet its current and expected needs by generating new discoveries, inventions creating new technologies and science-consuming innovation products.

Vision: VISU is scientific-research centre of the world standard having the reputation of a leader due to new important science results. It actively disseminates new knowledge and solutions upon significant spheres of man`s activity.

One of the main University priorities in research is to carry out large complex Research and Development activities aimed at solving specific and important tasks of the country as well as support of educational process including innovation development based on existing information technologies.
